### **Local State**

Handled within components using the `useState` hook for UI-specific states, such as:

- **Search Input:** State for storing user search queries.
- **Modal Visibility:** State for handling modal open/close actions.
- **Dropdown Selection:** State for managing selected filters or categories.

## **User Interface**

The application is styled using Bootstrap and React-Bootstrap for a clean and responsive UI.

## **Styling**

### **CSS Frameworks/Libraries**

- **Tailwind CSS** – Utility-first framework for fast and responsive styling.

## Theming

- Implement dark mode and light mode using Tailwind CSS (dark: variant) or Material-UI's theme provider for a customizable user experience.

## Testing

### Testing Strategy

- Jest and React Testing Library are used for unit and integration testing.
- Code coverage is monitored using Jest's built-in tools.

### Code Coverage

- **State Management:** Uses **Redux Toolkit** for global state (news, categories, user preferences) and **useState** for local UI states (modals, search input).
- **Component Structure:** Organized with **React functional components**, API calls using **Redux Thunks**, and reusable UI components for better maintainability.
